ABOUT US

Four Decades ago, in **1980 Shri Vogireddy Venkata Reddy** started a small retail timber depot "**Srinivasa Timber Depot**" in Anaparthi a beautiful and serene village located in the heart of East Godavari District, Andhra Pradesh. Locally popular with the name "**Vogireddy Timber**". With his skill in carpentry in childhood and having a vast knowledge of the indigenous species of wood in India, he started procuring raw material by the means of bullock cart and sell to the farmers for their home needs and agricultural purposes.

In 1992, a sawmill was setup in the premises for processing wood to meet the increasing demand locally. East Godavari being one of the most highly paddy cultivated region in India, has numerous number of ricemills for paddy processing. Till date we have numerous clients based on rice mills as well as individual clients who always seek for quality and durability.

In 2021, we started "Sri Srinivasa Timber Depot Wood Impregnation and Seasoning Plant" for making the wood more durable and termite resistant as well as attain its ideal moisture content. In 2022, we stepped into the manufacturing of wooden doors, door frames and furniture at "Apt Wood Engineering Solutions and Manufacturing Enterprises" at Duppalapudi, Anaparthi Mandal, East Godavari District, Andhra Pradesh.

A vast experience of over four decades, word of mouth, trust and outstanding quality and durability in the product we sell, have been our primary capitals to flourish and develop our business to this stage.

MISSION

Home is one of the basic need of Human beings and it's a dream come true for almost every individual to build a place of his own as he/she desires. The Entrance of a place "**DOOR**" gives a primary impression and stands for the value of Individual living place. A door made from solid wood always looks appealing and brings an element of warmth to the decor of the home.

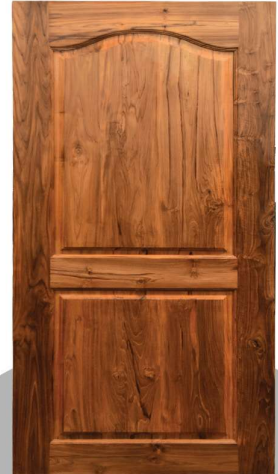

WOODMINE as a brand resolute to manufacture and supply high quality and excellent products made from wood. **GOOD WILL** is our strength and motive. Customer satisfaction has always been our prime aspect to attain this **GOODWILL** all through our journey. We stand tall to make our products with uncompromised skills and technology for fulfilling as per the customer's desire with a competitive and affordable pricing. "You name it we make it with wood".

VISION

To enhance and uplift our brand **WOODMINE** in the world, who seek for quality and standard. To provide world class solutions for wooden products with excellent craftsmanship and set a benchmark in serving beyond desires.

PROCESS AND TECHNOLOGY

We are glad to inform you that we follow the best techniques and modern technology for the raw wood to make it highly durable and perfectly suitable for the manufacture

Chemical Impregnation of Wood:

Vacuum-pressure impregnation is a primary wood protection process, in which we achieve the deepest possible penetration and a maximum uptake of the primary preservative into the wood. This process protects wood intended to be exposed to the most severe conditions and uses. It is necessary that the process of wood protection is carried out by us to all our raw material. Only special equipment with vacuum-pressure impregnation can provide sufficiently effective protection against wood pests and thus making the wood resistant to termites and borers.

Seasoning of Wood:

We season our wood by High Frequency Vacuum Wood Drying Method. High-frequency wood drying is the modern method used in raw wood drying so that treated wood can be used further in various processes. The advantages of high-frequency vacuum drying are that the wood is heated uniformly inside and outside at the same time, the drying speed is very fast, the drying quality is good, and the natural color of the wood can be maintained. HF wood dryer brings good drying quality with uniform moisture content, free of split or spark both on surface or inside of wood, short drying time will meet the customer's demand for production.

THANK YOU

WOODMINE: YOU NAME IT & WE MAKE IT. LOVE WOOD.
